

FOR IMMEDIATE RELEASE

**Delrin Cradle Bushings for S650 Mustangs
BK048 - \$169.95**

Minimize wheelhop, improve handling, and enhance the rear stability of your 2024 Mustang with Delrin Cradle Bushings from BMR Suspension. Stock rubber bushings with voids are great for minimizing NVH, but deflect tremendously. This causes wheelhop, which reduces traction and can damage rear suspension parts. Designed from solid Delrin, BMR's cradle bushings center the cradle and eliminate deflection caused by the stock rubber bushings. BMR Delrin Cradle Bushings (BK048) solidly connect the cradle to the chassis, eliminating deflection and transferring more power to the tires. BMR designed the BK048 for street performance, drag race, and handling applications, making them the perfect wheelhop solution for any performance-based S650 Mustang. Each bushing is machined to strict tolerances, which ensures high quality and an exact fit. These bushings eliminate all cradle movement, reducing wheelhop and increases handling stability, while giving you a much-improved overall feel with moderate increases in NVH. Installation time is about 3-4 hours. Proudly made in the U.S.A.!
