

FOR IMMEDIATE RELEASE

**Low Profile Chassis Jacking Rails for S650 Mustangs
CJR760 - \$99.95**

Add strong lift points and extra rigidity to your S650 Mustang with bolt-on Chassis Jacking Rails from BMR Suspension. Jacking the car on the pinch welds can easily damage the pinch welds and floor pans, eventually causing panel misalignment. Built from heavy-duty 1x 2-inch boxed tubing, BMR's Chassis Jacking Rails are designed to give you a rock-solid jacking point for your S650 Mustang. Our S650 Chassis Jacking Rails ensure the pinch welds and floor of the car don't get damaged from lifting the car. The CJR760 is designed to give maximum clearance, allowing you to maneuver most jacks underneath even a lowered car. With BMR's jacking rails, the entire side of the car can be easily jacked up from one jacking location. Shorter than BMR's other S650 Chassis Jacking Rails (CJR002), the CJR760 is the lightweight yet sturdy alternative. BMR Suspension designed the bolt-on Chassis Jacking Rails for all applications. Available in black hammertone and red powdercoat for long lasting good looks. Installation time is about 1 hour. Proudly made in the U.S.A.!
