

FOR IMMEDIATE RELEASE

**Polyurethane Differential Bushings for S650 Mustangs
BK049 - \$199.95**

Minimize wheelhop, improve handling, and enhance the rear stability of your 2024 S650 Mustang with polyurethane differential bushings from BMR Suspension. Stock rubber bushings with voids are great for minimizing NVH, but deflect tremendously, causing wheelhop, which can damage rear suspension parts. Designed from 95-durometer polyurethane, BMR's differential bushings deflect far less than soft rubber, and drastically decreases differential movement and pinion rise when compared to the factory bushings. BMR Polyurethane Differential Bushings (BK049) offer huge reductions in deflection, without excessive increases in NVH. BMR designed the BK049 for street performance, drag race, and handling applications, making them the perfect wheelhop solution for any performance-based S650 Mustang. Each bushing is manufactured to strict tolerances, using exact molds, which ensures high quality and a perfect fit. These bushings eliminate almost all differential movement, reducing wheelhop and increases handling stability, while giving you a much-improved overall feel in any performance driving situation. Installation time is about 3-4 hours. Proudly made in the U.S.A.!
