

FOR IMMEDIATE RELEASE

**Polyurethane Differential Bushings for Sixth Gen Camaro  
BK058 - \$79.95**

Minimize wheelhop, improve handling, and enhance the rear stability of your 2016-newer Camaro with polyurethane differential bushings from BMR Suspension. Stock rubber bushings with voids are great for minimizing NVH, but deflect tremendously, causing wheelhop, which can damage rear suspension parts. Designed from 95-durometer polyurethane, BMR's differential bushings drastically decreases differential movement and pinion rise when compared to the factory bushings. BMR Polyurethane Differential Bushings (BK058) offer huge reductions in deflection, without excessive increases in NVH. BMR designed the BK058 for street performance, drag race, and handling applications, making them the perfect wheelhop solution for any performance-based Sixth Gen Camaro. Each bushing is manufactured to strict tolerances, using exact molds, which ensures high quality and a perfect fit. These bushings eliminates almost all differential movement, reducing wheelhop and increases handling stability. This gives you a much-improved overall feel in any performance driving situation. Installation time is about 3-4 hours. Proudly made in the U.S.A.!
