

FOR IMMEDIATE RELEASE

**Delrin Cradle Bushings for 2016-Newer Chevrolet Camaro
BK062 - \$459.95**

Minimize wheelhop, improve handling, and enhance the rear stability of your 2016-Newer Camaro with Delrin Cradle Bushings from BMR Suspension. Stock rubber bushings with voids are great for minimizing NVH, but deflect tremendously under load. Designed from solid Delrin, BMR's cradle bushings are CNC-machined to strict tolerances to ensure an exact fit. The BMR Delrin Cradle Bushings (BK062) solidly connect the cradle to the chassis, eliminating deflection caused by the stock rubber bushings, and transfer more power to the tires. The lack of cradle movement reduces wheelhop, increases high-speed stability, and improves overall feel with only moderate increases in NVH. BMR designed the BK062 bushing kit for max-effort street performance, drag race, and handling applications, making it the perfect wheelhop solution for any performance-based Sixth Gen Camaro. Installation time is about 3-4 hours. Proudly made in the U.S.A.!
