

FOR IMMEDIATE RELEASE

**Rear Cradle Bushing Lockout Kit for 2016-Newer Chevrolet Camaro  
BK063 - \$389.95**

Reduce Wheelhop, bushing deflection, and cradle movement on your 2016-newer Chevrolet Camaro with a Cradle Bushing Lockout Kit from BMR Suspension. Built from CNC-machined Delrin, laser-cut stainless steel, and billet aluminum, BMR's BK063 Cradle Bushing Lockout Kit is designed to greatly reduce cradle bushing deflection. This is one of the biggest causes of wheelhop. BMR's BK063's Delrin upper bushing inserts are CNC-machined and specifically designed to fill the voids in the factory rubber bushings (front and rear). The additional hollow space is filled with CNC-aluminum "bullet" inserts. The kit is finished with laser-cut stainless steel washers that capture the lower Delrin inserts and prevent up and down movement. By filling the voids in the bushings, deflection is greatly reduced, and more power and torque can be transferred to the ground instead of being absorbed by the chassis. BMR Suspension designed the BK063 Rear Cradle Bushing Lockout Kit for street performance, drag race, and handling applications. This 100% bolt-on kit use existing boltholes and hardware, allowing for easy 2-hour installation with simple hand tools. Once installed, the Cradle Bushing Lockout Kit minimized bushing and cradle deflection with no significant change in NVH. When performance is a must, rely on BMR Suspension!
