

FOR IMMEDIATE RELEASE

**Front Chassis Brace for S550 Mustangs
CB007 - \$89.95**

Increase steering stability and increase K-member rigidity on your S550 Mustang with a front Chassis Brace from BMR Suspension. Built from heavy-duty rectangular steel tubing and 3/16-inch CNC-formed steel plate, BMR's CB007 Chassis Brace is designed to support and stiffen the factory S550 K-member. This increases steering feel and stability during aggressive maneuvering. BMR's CB007's front Chassis Brace links the rear legs of the K-member. The design reinforces this major area of the K-member efficiently reducing deflection when lateral loads are applied to the chassis. BMR Suspension designed the CB007 front Chassis Brace for any street performance, drag race, and handling applications. This 100% bolt-on kit uses existing boltholes, allowing for easy installation with simple hand tools. Once installed, the Chassis Brace minimizes K-member deflection with no change in NVH. This brace is designed to fit with both stock and aftermarket headers and exhaust systems.

BMR Suspension's CB007 front Chassis Brace is available in black hammertone and red powdercoat for long-lasting good looks. Installation time is about 1 hour. Proudly made in the U.S.A.!
