

FOR IMMEDIATE RELEASE

**BMR Suspension Non-Adjustable Front and Rear Sway Bar Kit for Sixth Gen
Camaro
\$429.95**

Improve handling, reduce body roll, and increase cornering stability with a non-adjustable sway bar kit for the Sixth Gen Camaro from BMR Suspension. Designed from 1.25-inch (front) and 1.25-inch (rear) DOM steel tubing, the BMR sway bars are cold formed to better resist torsional fatigue and retain "memory" far longer than conventional hot-formed bars. The BMR Non-Adjustable Sway Bar Kit (PN SB049) gives you a huge increase in sway bar rate over the stock bars, reducing body roll and improving handling. BMR Suspension designed these non-adjustable sway bars for street performance, autocross, and road race applications. The SB049 attaches to the car with 95-durometer polyurethane bushings, greatly reducing the deflection seen in rubber bushings. Thrust washers locate the sway bars, eliminating lateral movement under aggressive cornering. Front sway bar (SB050) and rear sway bar (SB051) are also sold separately. Installation time is 3-4 hours. Available in black hammertone or red powdercoat. Proudly made in the U.S.A.!
