

FOR IMMEDIATE RELEASE

**Strut Tower Brace for Sixth Gen Camaro –  
STB018 - \$119.95**

Reduce chassis flex and increase handling and performance on your 2016-newer Chevrolet Camaro with a Strut Tower Brace from BMR Suspension. The Camaro chassis flexes dramatically, even with mild amounts of torque and horsepower. BMR's Strut Tower Braces are manufactured from a mix of 1x1.5-inch rectangular steel tubing and laser-cut 3/16-inch steel plate. This design adds loads of strength to the front frame and suspension. These Strut Tower Braces are engineered to considerably strengthen the chassis. The STB018's two-point design solidly links the strut mounts, reinforcing the unibody and suspension. BMR has designed the STB018 for the street performance, drag race, and handling applications. Installation can be done in 10 minutes with simple hand tools. The STB018 is available in black hammertone and red powdercoat for long-last good looks. When performance is a must, rely on BMR Suspension!
