

FOR IMMEDIATE RELEASE

**Polyurethane Differential Bushing Lockout Kit for S650 Mustangs
BK051 - \$49.95**

Reduce wheelhop and pinion rise, and enhance the rear stability of your 2024 Mustang by reducing differential movement with a Polyurethane Differential Bushing Lockout Kit from BMR Suspension. Stock rubber bushings with voids are great for minimizing NVH, but cause wheelhop and damage to rear suspension parts. Designed from 95-durometer polyurethane, these diff bushing lockouts greatly reduce deflection, differential movement, and pinion rise that you experience with the factory bushings. BMR's Polyurethane Differential Bushing Lockout Kit (BK051) transfers more power to the differential by not absorbing it with wasted movement. BMR designed the BK051 for street performance, drag race, and handling applications, making them the perfect wheelhop solution for performance-based S650 Mustangs. Each lockout is molded to strict tolerances, which ensures high quality and a perfect fit. These greatly reduce differential movement, increasing handling stability and giving you a much-improved overall feel in any performance driving situation. Installation time is about 1 hour. Proudly made in the U.S.A.!
