

FOR IMMEDIATE RELEASE

BMR Front Chassis Brace for 1968-1972 A-Body

CB410 - \$229.95

Increase steering stability and reduce chassis deflection on your 1968-1972 A-Body with a front Chassis Brace from BMR Suspension. Manufactured from heavy-duty yet lightweight DOM steel tubing, BMR's Chassis Brace (CB410) is designed to support and stiffen the factory A-Body chassis and front suspension. This improvement in rigidity increases steering feel and stability during aggressive maneuvering. The BMR Front Chassis Brace's (CB410) heavy-duty design reinforces the front frame horns and front crossmember area on the GM A-body platform. The CB410 is a 100% bolt-on kit that uses existing bolt holes, allowing for easy installation with simple hand tools. BMR Suspension designed the CB410 front Chassis Brace for street performance, drag race, and handling applications. BMR Suspension's CB410 front Chassis Brace is available in black hammertone and red powdercoat for long-lasting good looks. Installation time is about 1 hour. Proudly made in the U.S.A.!
