

FOR IMMEDIATE RELEASE

**BMR K-Member Chassis Brace for S650 Mustang
CB763 - \$119.95**

Improve steering stability, increase chassis rigidity, and expand overall handling capabilities in your S650 Mustang with a K-Member Chassis Brace from BMR Suspension. The K-Member is the mounting point for the entire front suspension and is under a lot of stress, especially during hard cornering when the car is being tossed back and forth. Constructed from 1.25" x 0.65" chromoly steel tubing, our K-Member Chassis Brace provides improved stiffness and K-Member support for hardcore performance applications. The K-Member Chassis Brace (CB763) ties the front end together and keeps k-member flex to a minimum, positively impacting your Mustang's handling. This chassis brace bolts to the front of the k-member, tying both sides together for much improved front end rigidity. The CB763 conveniently utilizes factory mounting points for easy installation. BMR has designed the CB763 for street performance and handling applications. Installation time is 1 hour. Available in black hammertone and red powdercoat for long lasting good looks. Proudly made in the U.S.A.
