

FOR IMMEDIATE RELEASE

**BMR Suspension Front Subframe 4-Point Chassis Brace for S650 Mustangs**

**CB770 - \$209.95**

Greatly increase K-member rigidity and steering stability on your S650 Mustang with a Front Chassis Brace from BMR Suspension! Factory K-members and lower control arm mounts can deflect under hard braking and extreme lateral loading. BMR's 4-Point Chassis Brace (CB770) is manufactured from heavy-duty DOM steel tubing to greatly reduce K-member deflection. The CB770 reinforces the front lower control arm mounts and supports the K-member in your Mustang to increase the steering feel and stability during light and heavy maneuvering. BMR's 4-Point Chassis Brace utilizes a 100% bolt-on design that allows for an easy installation process with simple hand tools. For those looking for a quick, but effective, upgrade to reduce deflection while minimizing NVH changes, the CB770 is the part you need.

BMR has designed the CB770 for street performance, drag racing, and handling applications. BMR's CB770 is available in red or black hammertone powder coat for long lasting good looks, and installation time is 1-2 hours. As with all BMR Suspension products, the CB770 is proudly designed and made in the USA!
