

FOR IMMEDIATE RELEASE

BMR Suspension Front Subframe 2-Point Chassis Brace for S650 Mustangs

CB771 - \$89.95

Increase steering stability and K-member rigidity on your S650 Mustang with a Front Chassis Brace from BMR Suspension! Factory K-members can deflect under hard braking and extreme lateral loading. BMR's 2-Point Chassis Brace (CB771) is manufactured from heavy-duty 1.25-inch DOM steel tubing and designed to support and stiffen the factory K-member. The CB771 utilizes a 100% bolt-on design and mounts to two points on the subframe to increase steering stability and reduce K-member deflection during light and heavy maneuvering. For those looking to stiffen up the front of their Mustang while minimizing changes in NVH, the CB771 is the best part for you.

BMR has designed the CB771 for street performance, drag racing, and handling applications. BMR's CB771 is available in red or black hammertone powder coat for long lasting good looks, and installation time takes about 1 hour. As with all BMR Suspension products, the CB771 is proudly designed and made in the USA!
