

FOR IMMEDIATE RELEASE

**BMR Suspension Front and Rear Control Arm Bearing Kit for 2006-2013 Corvette Z06s and 2009-2013 Corvette ZR1s**

**CBK565 - \$1289.95**

Greatly reduce wheel hop and add cornering consistency to your C6 Corvette Z06 and ZR1 with a Control Arm Bearing Kit from BMR Suspension! The OE bushings on your Corvette are manufactured from soft rubber that deflects during normal and aggressive maneuvering. BMR's Front and Rear Control Arm Bearing Kit (CBK565) utilizes machined 6061 billet aluminum bearing cups and heavy-duty spherical bearings to replace those soft bushings and eliminate control arm bushing deflection. In addition, the CBK565 significantly reduces wheel hop and dramatically increases suspension control, allowing you to push your Z06/ZR1 to the max on the track and street. BMR's CBK565 also greatly improves steering feel and stability, allowing you to be more aggressive and consistent during cornering.

BMR has designed the CBK565 for max effort street performance, drag racing, and handling applications. BMR's CBK565 is available black anodized for a durable finish, and installation time is about 5-6 hours. BMR also offers the front bearings (CBK556, \$639.95) and rear bearings (CBK567, \$679.95) separately. As with all BMR Suspension products, the CBK565 is proudly designed and made in the USA!

For non-Z06 and ZR1 Corvettes, a different bearing kit is required. For these vehicles, BMR recommends its CBK555 bearing kit.
