

FOR IMMEDIATE RELEASE

**BMR Suspension Front and Rear Control Arm Bearing Kit for 2014-2019 C7
Corvettes**

CBK575 - \$1359.95

Greatly reduce wheel hop and add cornering consistency to your C7 Corvette with a Control Arm Bearing Kit from BMR Suspension! The OE bushings on your C7 Corvette are manufactured from soft rubber that deflects during normal and aggressive maneuvering. BMR's Front and Rear Control Arm Bearing Kit (CBK575) utilizes machined 6061 billet aluminum bearing cups and heavy-duty spherical bearings to replace those soft bushings and eliminate control arm bushing deflection. In addition, the CBK575 significantly reduces wheel hop and dramatically increases suspension control, allowing you to push your Corvette to the max on the track. BMR's CBK575 also greatly improves steering feel and stability, allowing you to be more aggressive and consistent during cornering.

BMR has designed the CBK575 for max effort street performance, drag racing, and handling applications. BMR's CBK575 is available black anodized for a durable finish, and installation time is about 5-6 hours. BMR also offers the front bearings (CBK576, \$689.95) and rear bearings (CBK577, \$699.95) separately. For those running a 15" conversion kit, BMR also offers the Rear Upper Control Arm Bearing Kit (CBK578, \$459.95). As with all BMR Suspension products, the CBK575 is proudly designed and made in the USA!

To preview all of BMR's high-performance suspension parts, please visit www.bmrsuspension.com, email sales@bmrsuspension.com, or contact them at BMR Suspension, 1033 Pine Chase Avenue, Lakeland, FL 33815, 813-986-9302, Fax: 813-986-8055.
