

FOR IMMEDIATE RELEASE

**BMR Suspension Adjustable Rear Lower Control Arms
for 2016-2024 Chevy Camaros**

LCA362 - \$409.95

Eliminate lower control arm flex and add adjustability to your 6th Gen Camaro with Rear Lower Control Arms from BMR Suspension! Stock stamped steel control arms with soft rubber bushings deflect under load and absorb power instead of transferring it to the tires. Manufactured from heavy-duty 2-inch square steel tubing, BMR's Rear Lower Control Arms (LCA362) feature an adjustable design for easy on-car adjustments. BMR's LCA362 eliminates lower control arm flex on the rear of your coil over-equipped Camaro and increases suspension control, improving performance on the street and track. By upgrading to the LCA362, you are giving your Camaro greater adjustability and better performance!

BMR has designed the LCA362 for street performance, drag racing, and handling applications. BMR's LCA362 is available in red or black hammertone powder coat for long lasting good looks, and installation time is about 2-3 hours. As with all BMR Suspension products, the LCA362 is proudly designed and made in the USA!

To preview all of BMR's high-performance suspension parts, please visit www.bmrsuspension.com, email sales@bmrsuspension.com, or contact them at BMR Suspension, 1033 Pine Chase Avenue, Lakeland, FL 33815, 813-986-9302, Fax: 813-986-8055.
