

FOR IMMEDIATE RELEASE

**Rear Cradle Centering Sleeves for S650 Mustangs  
SCB766 - \$29.95**

Add rigidity to the subframe of your S650 Mustang with Rear Cradle Centering Sleeves from BMR Suspension. Under hard launches, the subframe of your Mustang can shift, resulting in slower launches and wheel hop. Designed from 95-durometer polyurethane, BMR's Rear Cradle Centering Sleeves (SCB766) prevent your subframe from shifting during launches and cornering. This results in more consistent launches and more power being transferred to the tires. BMR designed the SCB766 for street performance, drag racing, and handling applications, making them the perfect solution for any performance-based S650 Mustang. BMR's SCB766 includes the necessary hardware needed for installation and can be installed with simple hand tools. Installation time is about 1-2 hours. Proudly made in the USA!
