

FOR IMMEDIATE RELEASE

**Twin-Tube Strut Tower Brace for Sixth Gen Camaro –
STB019 - \$149.95**

Reduce chassis flex and increase handling and performance on your 2016-newer Chevrolet Camaro with a Twin-Tube Strut Tower Brace from BMR Suspension. The Camaro chassis flexes dramatically, even with mild amounts of torque and horsepower. BMR's Strut Tower Brace is manufactured from a mix of 1-inch steel tubing and laser-cut 3/16-inch steel plate. This design adds loads of strength to the front frame and suspension without adding lots of unwanted weight. These Strut Tower Braces are engineered to considerably strengthen the chassis. The STB019's twin-tube design solidly links the strut mounts, reinforcing the unibody and suspension. BMR has designed the STB019 for street performance, drag race, and handling applications. Installation can be done in 10 minutes with simple hand tools. The STB019 is available in black hammertone and red powdercoat for long-last good looks. When performance is a must, rely on BMR Suspension!

To preview all of BMR's high-performance suspension parts, please visit www.bmrsuspension.com, email sales@bmrsuspension.com, or contact them at BMR Suspension, 928 Sligh Ave, Seffner, FL 33584, 813-986-9302, Fax: 813-986-8055.
