

FOR IMMEDIATE RELEASE

**Stainless Steel Strut Tower Brace for Sixth Gen Camaro –  
STB020 - \$249.95**

Reduce chassis flex and increase handling and performance on your 2016-newer Chevrolet Camaro with a Stainless Steel Strut Tower Brace from BMR Suspension. The Camaro chassis flexes, even with mild amounts of torque and horsepower. BMR's Strut Tower Brace is manufactured from a mix of 1-x2-inch stainless steel tubing and laser-cut 3/16-inch steel plate. This design adds loads of strength to the front frame and suspension without adding lots of unwanted weight. These Strut Tower Braces are engineered to considerably strengthen the chassis. The STB020's design solidly links the strut mounts together, reinforcing the unibody and suspension and adding great looks to the engine bay. BMR has designed the STB020 for street performance and handling applications. Installation can be done in 10 minutes with simple hand tools. The STB020 comes in a brushed stainless steel finish for long-last good looks. When performance is a must, rely on BMR Suspension!
