

FOR IMMEDIATE RELEASE

BMR Suspension Rear Shock Tower Brace for 1964-1967 GM A-Bodies

STB402 - \$99.95

Reinforce the chassis on your 64-67 A-Body with a Rear Shock Tower Brace from BMR Suspension! The chassis of your A-Body can flex dramatically, even with mild amounts of torque and horsepower. BMR's Rear Shock Tower Brace (STB402) connects the rear upper shock mounts on your vehicle, dramatically increasing chassis stiffness and improving handling. The STB402's 100% bolt-on design allows for an easy installation process with simple hand tools. For those looking for a quick, but effective, method to reinforcing their A-Body's chassis, the STB402 is the way to go.

BMR has designed the STB402 for street performance, drag racing, and handling applications. BMR's STB402 is available in red or black hammertone powder coat for long lasting good looks, and installation time is about 1 hour. As with all BMR Suspension products, the STB402 is proudly designed and made in the USA!
