**Tubular Upper and Lower Torque Box Reinforcement Braces for
1979-2004 Ford Mustang
TBR004 - \$229.95**

Increase stiffness and reinforce the torque boxes in your 1979-2004 Mustang with Tubular Torque Box Reinforcement Braces from BMR Suspension. When large amounts of torque are applied to the Fox chassis, the factory torque boxes are known to crack and rip. BMR's Torque Box Reinforcement Braces are designed to bolt into the '79-'04 Mustang chassis, adding strength to the upper and lower control arm mounts. BMR's TBR004 Torque Box Reinforcement Braces are designed for street performance, drag race, and handling applications. This kit includes braces and hardware to reinforce the upper and lower rear control arm mounts (torque boxes). The tubular upper reinforcement braces and CNC-laser cut, CNC-formed, MIG-welded lower plates bolt in using supplied hardware and require very little fabrication to install. The braces can also be purchased separately for the uppers (TBR005) and lowers (TBR003). When performance is a must, rely on BMR Suspension!

To preview all of BMR's high-performance suspension parts, please visit www.bmrsuspension.com, email sales@bmrsuspension.com, or contact them at BMR Suspension, 928 Sligh Ave, Seffner, FL 33584, 813-986-9302, Fax: 813-986-8055.
